

RUBINA REKIĆ

rrekic1@etf.unsa.ba · Sarajevo, BiH · rubina-rekic.github.io · github.com/rubina-rekic · [LinkedIn](#)

EDUCATION

University of Sarajevo

Bachelor of Engineering in Computer Science
GPA: 8.8/10.0

(Expected 2026)

Sarajevo, Bosnia and Herzegovina

JU “Gimnazija” Cazin

High School Diploma

2019 – 2023

Cazin, Bosnia and Herzegovina · Valedictorian (Učenik generacije)

SKILLS

Languages: C#, Kotlin, Java, JavaScript, Python, SQL, Git

Full-Stack: React, Node.js, Express.js, ASP.NET Core, Flask, Tailwind CSS, REST API, MySQL, SQLite

Mobile: Android Studio, Kotlin, Room Database, REST API integration

Practices: OOP, SOLID, Design Patterns, TDD, Unit Testing, Agile (sprint-based development)

Human Languages: Bosnian (native) | English (professional) | German (limited working proficiency)

EXPERIENCE AND PROJECTS

Encode d.o.o.

March 2025 – Present

Mathematics Instructor

Delivered preparatory classes for university students from the Faculty of Mechanical and Electrical Engineering

ScenarijPro – Full-Stack Web Application

October 2025 – January 2026

Built a collaborative screenplay editor with real-time conflict resolution, version control checkpoints, and script analysis
Developed iteratively across 4 sprints: from static UI to a full Node.js/Express REST API with MySQL and Sequelize ORM

YourRide – Full-Stack Web Application

Spring 2025

Developed a ride-sharing platform using ASP.NET Core with SignalR for real-time notifications and role-based access control
Designed full system architecture including UML diagrams, applied SOLID principles and structural design patterns

FilmMate QA – .NET Application

Fall 2025

Applied TDD (Red-Green-Refactor), MSTest unit testing with 90%+ coverage, and white/black-box testing techniques

NewsFeed Android App – Mobile Application

Spring 2025

Developed an Android application in Kotlin with real-time news fetching via REST API and local persistence using Room database
Implemented category filtering, sorting, and automatic feed refresh with 3-second polling interval

Neural Networks as Graphs – Research Project

2025/2026

Modeled biological neural networks of varying depth and width as directed graphs using graph theory (Dale’s Law, Barabási-Albert model)
Currently extending this research toward AI/ML applications, exploring learning dynamics and training behavior through a graph-theoretic lens
